# Wheat Breeding

- Bread Wheats
- Durum

# Data Comparison Tool

- **Expanded:**
  - provides trial description information (location, fertilizer, precipitation etc.)
  - Handles replicated data
  - Made more universal in its application for usage by the ICIS community
- **Started conversion from VBA to VB.NET**
  - Web-based querying

# Data Templates

- **Created:**
  - Captures all data measured as well as the official methods and scales used
- Filled in by senior technicians in charge of organizing durum & bread wheat breeders data
- Example

# DMS

- Durum from 1995 to 2005
- Bread Wheat from 1996 to 2005

# GMS

- **Constantly updating and correcting as we receive the information**
- **Worked out a protocol for separating private (local) pedigree information from public (central) pedigree information**
- **Sent public durum & bread wheat to be added to GWIS (1890-2000)**

# Coefficient of Parentage

- Being used in various projects at SPARC

# ICIS on the AAFC Network

# ICIS LIMS/GEMS (ICARDA)

- **Evaluated**
- **Additional needs**
  - **Adding a Melting Temperature (T<sub>m</sub>) field**
  - **Primer synonyms (different labs using different acronyms)**
  - **Source of primer**
  - **References on primers**

# Molecular Variant Data

- Looking at storing this data in the DMS
- Considering expanding Data Comparison to include allele data with the phenotypic data
- Open to discussion

# Needs of ICIS

- **Restrict users from having access to specific studies in the DMS and certain pedigree information in the GMS**
- **Get web-based version up and running**

## Needs (con'd)

- **More than one reference/genotype in the GMS**
- **Continued refining of queries to meet AAFC & ICIS community needs**
- **alpha or numeric choice for identification of filial generations**
