

ICIS Data Validation Tool v5.5.1.2

Maria Corina D. Habito

Database Applications Specialist IRRI-CRIL

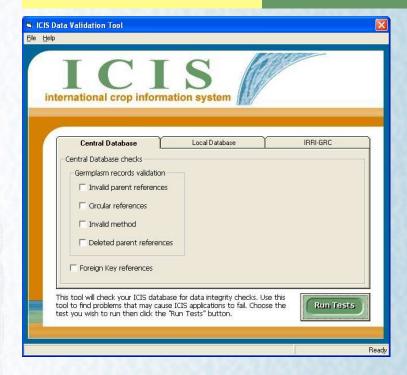

Objectives of the tool

- 1) Search ICIS for data errors
- 2) Check referential integrity of ICIS databases

Background

• 2006: First introduced ICIS Developers' Workshop

- 2007: Original Visual Basic prototype translated to Delphi, and official released as part of the ICIS 5.4 package
- 2008: Improvement of reporting format and refinement of SQL statements used

Overview of features: User interface

ICIS Data Validation Tool File Help C:\DOCUME~1\mhabito\LOCALS~1\Temp\ICIS.INI International Crop Information System Database Change... Data Validation Tool foreign key Select data check(s) Results Create file(s) with error-flagged records references. Database foreign key references by table: Rice-specific Output file type Genealogy Management System Data Management System Text (.txt) MS Excel (.xls) Incorrect parent references Output file name □ Circular references ☐ Germplasm creation date (GDATE) Timestamp first ☐ Deleted parent references ▼ Include error description ☐ GDATE of progenitors Error code first Replaced parent references □ Name date (NDATE) Sorting within output file **GMS** ☐ NDATE VS GDATE ICIS username No names
□ □ Luplicate names Year (YYYYY) Possible duplicate names Year and month (YYYYMM) Year, month and day (YYYYMMDD) Count preferred IDs Count preferred Names ☐ Incorrect germplasm creation method **DMS** Creation method and name type combinations Germplasm location Rice-Select all queries Check: V Central database Local database specific Deselect all gueries Reset RUN

Overview of features

Option to just generate SQL statements (for manual querying) OR directly query the database(s) (complete with creation of files containing error-flagged data)

Overview of features

Option to do checking on LOCAL database
NEW

Check: 🔽 Central database

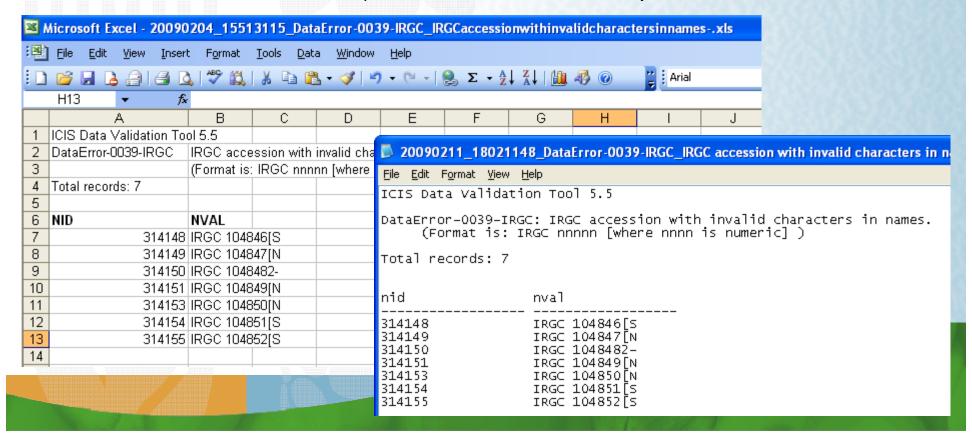

Local database

Overview of features

- Option to print dataset(s) with errors in a TEXT file or MS EXCEL file
 - Printing to text file is faster, but limited to 20 chars per column
 - → Printing to Excel is slower, but no truncation in printing
 - → If Excel is selected but no. of records > 65530 (maximum row capacity of Excel is 65536), datasets will instead be placed in a text file.

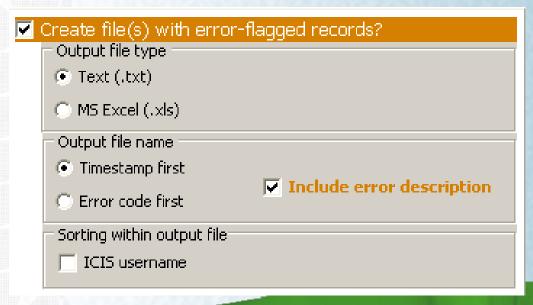

Overview of features

- More result file options
- → Control over format of filename

NEW

- i. Timestamp first?
- ii. Error code first?
- iii. Include description of error code?

→ User may sort data records within a file by ICIS username

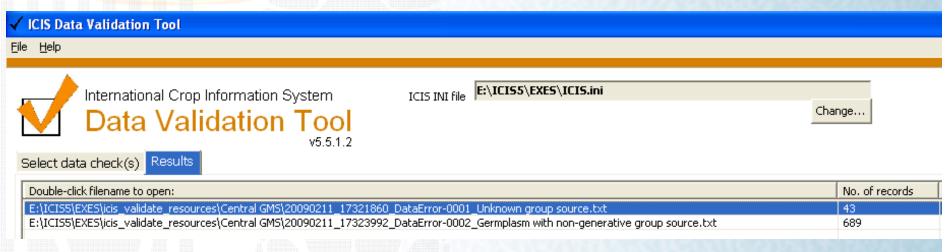

Overview of features

• Improved reporting format **PEW**

Data validation results neatly organized in a listview

- → Double-click the name of the results file to open it
- → Number of records with errors (per error code) immediately visible

....data correction requests are posted on CropForge (Special new trackers in the CropForge IRIS Communication project were created just for managing data correction requests)

Choose a tracker and you can browse/edit/add items to it.

Tracker		
	Bugs	Bug Tracking System
眄	Support	Tech Support Tracking System
	Feature Requests	Feature Request Tracking System
	IRIS-GMS Update	This is the tracker to monitor the requests and upda
	IRIS-DMS Update	The tracker to monitor the requests and updates of
	IRIS-GEMS	The tracker to monitor the requests and updates of
	IRIS-IMS	Establishment of the Inventory Management System
酮	IRRI SMTA Web Portal Database	Monitoring of the updates of the SMTA database an
	IRRI LIMS	Development of the Laboratory Information Manager
酮	IRIS Installation	Requests for installation of IRIS
眄	IR64 Mutant Database	IR64 Mutant Database
酮	IRIS-GMS Data Errors	Requests to correct data errors in IRIS GMS
	IRIS-DMS Data Errors	Requests to correct data errors in IRIS DMS
	IRIS WEB Update	Requests to update IRIS data on www.iris.irri.org

Moving forward...

- Add functionalities for automation of some data corrections (work in progress)
- Further testing on different database backends
