Crop Research Informatics Laboratory

Changes:

❑ Next Sequence of a Name Type

➤ Who: IRRI users

➤ Why? Useful in automatically generating names of a specific name type

❑ Additional Checking:

✓ Name Status

✓ Proper Method-Name Type combination

➤ Who: IRRI users

➤ Why?   Makes use if a particular Name STATUS is required
Relationship bet. Germplasm methods and nametype is enforced.

CIMMYTMR

Changes (cont.):

- ❑ Customized Data
  - ➢ Who: Nunhems
  - ➢ Why? Can display data or study from the DMS for a particular germplasm; the only limit is users' SQL imagination
- ❑ Attribute Inheritance
  - ➢ Who: IRRI, Nunhems
  - ➢ Why? Makes sure that the attributes of parents are automatically inherited for germplasms derived via derivative or management methods
- ❑ Attributes as Documents/Files
  - ➢ Who: IRRI, Bayer
  - ➢ Why? Users want to attached files such as images, docs, .pdfs for each germplasm in their list

Changes (cont.):

- ❑ Import
  - ✓ Basic
  - ✓ Advance

  - ➢ Who: Bayer
  - ➢ Why? For users who likes to define their own methods, nametypes, germplasm date/location, name date/location, and upload additional information all in one go.
- ❑ Barcode Tool
  - ➢ Who: IRRI
  - ➢ Why? Useful in generating labels for seed increase; a pilot model for other users who wish to generate barcode for each germplasm in their list as well
- ❑ Add a new Germplasm
  - ➢ Who: Nunhems
  - ➢ Why? Familiarity and ease-of-use
- ❑ InTrack Reserve Form
  - ➢ Who: Bayer, CIMMYT
  - ➢ Why? Useful in integrating seed inventory data in their lists

CIMMYT MR

Changes (cont.):

❑ Total of bug fixes: ~100

❑ Total of feature requests: ~30

Thank you
