

SetGen Updates

May 2006 (CIMMYT)

Casper aan den Boom (Nunhems)

SetGen Changes: 1. SetGen Lists

- More logic column headers when re-filling the columns
- Saving and retrieving of ((*virtual*) extra) columns and column headers
- Extended menu options under "right-mouse-click menu's"
 - (Random) Sorting now also on tagged entries only
 - Add / Insert new entry (+) with pre-filled value from tagged list entry
 - Possibility to insert text-lines in Lists
 - Possibility to do check for available name types for GIDs in Lists (LOT Number)
 - Updated Female and Male information that can be filled in
 - Possibility to (re-)fill several columns with cross info according specified level
- Extended selection possibilities for copy-ing records from Browse List to Edit List window
- Improved and stable Folder/List possibilities

SetGen Changes:

2. Batch screens (B+,B-,Bx) and - screen

- Reviewed Lay-Out and make it more UNIFORM over these functions
 - Order of items in batch screens in updates
 - Sorting of names in drop-down lists now alphabetic in all cases
 - Pre-filled fields as GID and date already
- Added "Derivative Naming Convention" to Source column as already available for Entry Code column

SetGen Changes:

3. Other changes

- We tried to make functions and names of functions more UNIFORM over different screens
- Import Excel file with **existing** GIDs via "File - Import List" (next to B+ function)
- Selection History facility now also available in GMSSearch & via RMB View Characteristics will be shown
- Help file in SetGen can now be configurable
- MGID implemented and handled in first functions
- OK to ALL button for deleting multiple GIDs at once

Thanks
